

Academic integrity declaration

By submitting work for assessment, I hereby declare that I understand the University's policy on academic integrity and the rules of the assignment as set by the subject coordinator regarding the use of artificial intelligence software, including editing and translation tools.

I declare that the submission is original and solely my work, and that I have not been assisted by another person (collusion) apart from where the submitted work is for a designated collaborative task, in which case the individual contributions are indicated. All sources and tools used have been appropriately cited or acknowledged, and any copied or modified code has been declared using the methods indicated by my subject coordinator.

System Project: Individual Contributions to Teamwork

15 Points Possible

▼ Details

Marking Scheme for: System Project: Teamwork Requirements

The three standards below assess your contributions to the teamwork component of carrying out your System Project.

- **These standards are all assessed from the evidence you submit across your individual component in the weekly teamwork document submission.**
- **Each standard is worth 5% of the overall subject grade.**

The descriptions below define the Meets level for each standard. As per the [grading approach page \(https://canvas.lms.unimelb.edu.au/courses/238681/pages/grading-approach-for-elen90095-2026-sm2\)](https://canvas.lms.unimelb.edu.au/courses/238681/pages/grading-approach-for-elen90095-2026-sm2), the generic descriptions of Exceeds, Approaching, and Not yet demonstrated are taken relative to the Meets level.

These standards are demonstrated through your individual contributions to the weekly teamwork document, and are checked during weekly check-ins with the teaching team. The

teamwork document templates provide guidance on how you should structure your weekly contributions to the teamwork document.

Standard 1: Completion of individual contributions to weekly teamwork submissions

My assessment evidence demonstrates that I have regularly completed my individual contributions to the weekly teamwork submissions with specific, accurate, and meaningful details.

To meet this standard, the assessment evidence should provide:

- Completion of the required individual sections in all but at most one scheduled weekly submission.
- Specific details of my actual work and interactions, rather than generic statements about participation or progress.
- Sufficient context or references to relevant project work for your team and teaching staff to understand the entries.

Note: This standard assesses completion of a usable record, not the success of the work reported. An unsuccessful experiment, unresolved blocker, or change of plan can be documented meaningfully and fully satisfy the submission requirement.

Standard 2: Reliable individual contributions to Exciting AI4R Tech

My assessment evidence demonstrates that I can contribute reliably to the shared technical work of the System Project by making realistic commitments, following through on agreed work, and communicating changes that affect the team.

To meet this standard, the assessment evidence should provide:

- Clear, realistic commitments agreed with team members (of the sub-team or overall team as appropriate) and connected to shared project priorities.
- Evidence of work undertaken and follow-through, including completion or timely, justified renegotiation of agreed commitments.
- Communication of progress, blockers, dependencies, and hand-offs in time for team members to plan and coordinate their work.

Note: This standard assesses how reliably you contribute to shared technical work, rather than the technical sophistication of your contribution. Technical understanding and investigation are assessed through the **System Project: Technical Details standards**.

Standard 3: Individual contributions to Exciting AI4R Collaborations

My assessment evidence demonstrates that I can collaborate across differences in technical knowledge and perspectives to build shared understanding and help the team address project needs.

To meet this standard, the assessment evidence should provide:

- Purposeful engagement with team member's knowledge, goals, constraints, or perspectives in addressing a shared project need.
- Constructive exchanges that make my contribution useful to others and show how I considered or responded to their input.
- Evidence of how these interactions informed my own or shared understanding, decisions, actions, or ways of working, including important issues that remained unresolved.

Note: This standard can be demonstrate through interactions with team member from your sub-team or from the overall team. Relevant collaboration may involve seeking or sharing expertise, clarifying assumptions, considering another perspective, raising a concern, responding to feedback, supporting a team member, or working jointly on an interface problem. These are examples, not a checklist. Collaboration does **NOT** require a formal leadership role and also does **NOT** required team members from different degree programs.
